2 Application core repository skeleton

DONE | TOTAL: orig ~6d · total ~1.8d | completed 13 Sep 2026

GOAL

Create the Java repository and prove that it builds and runs independently.

RESULT

- Application-core and runnable application artifacts.
- Clean Linux and Windows build/test.
- Traceable build identity and lifecycle.

END DEMO

- Build from a clean checkout.
- Produce both artifacts.
- Start, identify and stop the application.

DOCUMENTATION

30-UC W-40 | 50-SDE-02 A-100 | 41-01-SSD R-25 | 43-01-SDD-02 W-55 | 32-03-IDD R-45 | 60-SVP W-35

TOOLING / ENGINEERING ENVIRONMENT

T01 DONE
Java toolchain baseline

T02 ~0.5d | after T01 DONE
Create tool.java-project

T03 ~0.5d | after T02 DONE
Maven Wrapper fixture

T04 ~0.5d | after T02 DONE
Pin Java 8 + Maven baseline

T05 ~0.5d | after T03 T04 DONE
Linux canonical CI

T06 ~0.5d | after T03 T04 DONE
Windows compatibility CI

T07 ~0.5d | after T05 DONE
Canonical artifact + provenance

T08 ~0.5d | after T05 T06 T07 DONE
Version reusable workflow

APPLICATION / PRODUCT

A01 after T08 DONE
Create SI-01 implementation repository

A02 after A01 DONE
Repository baseline files

A03 ~0.5d | after A01 DONE
Maven reactor / artifact skeleton

A04 ~0.5d | after A03 DONE
Package / responsibility boundaries

A05 ~0.5d | after A04 DONE
Minimal runnable app lifecycle

VERIFICATION / TEST

V01 after T05 DONE
Generic fixture - Linux verify

V02 after T06 DONE
Generic fixture - Windows verify

V03 after T07 V02 DONE
Canonical artifact smoke

V04 after T08 A01 DONE
Clean-checkout consumer proof

V05 after A03 DONE
Architecture/dependency checks

V06 after A05 V05 DONE
0.1.0 release build / identity proof

v0.1.0 points to release...
