

SIP Step 2 — Framework repository skeleton

DONE | baseline ~6d | orig ~6d · act ~1.6d | completed 13 Sep 2026

Create the Java repository and prove that it builds and runs independently.

END DEMO · SIP-STP02-DEMO

- Build from a clean checkout.
- Produce both artifacts.
- Start, identify and stop the application.

DOCUMENTATION

04-UC W40 — System use cases

20-01-SRD R25 — SI-01 requirements

40-01-IDD R45 — Remote API interface

13-SDE A100 — Java build/test toolchain

31-01-SDD-02 W55 — Java component/package...

50-SVP W35 — Software Verification Plan

Tooling / engineering environment

T01 Java toolchain baseline DONE ~0.5d after T01	T02 Create tool.java-project DONE ~0.5d after T02	T03 Maven Wrapper fixture DONE ~0.5d after T02
T04 Pin Java 8 + Maven baseline DONE ~0.5d after T02	T05 Linux canonical CI DONE ~0.5d after T03,T04	T06 Windows compatibility CI DONE ~0.5d after T03,T04
T07 Canonical artifact + provenance DONE ~0.5d after T05	T08 Version reusable workflow DONE ~0.5d after T05,T06,T07	

Application / product

A01 Create SI-01 implementation repository DONE after T08	A02 Repository baseline files DONE after A01	A03 Maven reactor / artifact skeleton DONE ~0.5d after A01
A04 Package / responsibility boundaries DONE ~0.5d after A03	A05 Minimal runnable app lifecycle DONE ~0.5d after A04
